

Abstract

The invention relates to a device and a method for dynamically animating, processing and managing digitized images in Internet-based databases. The method for dynamically animating, processing and managing the digitized images, in which digitized image data which represents the digitized images is transmitted to a server (2), the digitized image data is stored in a memory (14) of the server (2), and attribute data is assigned to the digitized image data and stored in the memory (14) of the server (2), is defined in that an Internet address is assigned to the stored digitized image data and the associated stored attribute data, and when the Internet address is called on the server (2), an animated object is generated on the basis of the stored digitized image and attribute data which is assigned to the Internet address. The device is adapted in order to be able to carry out the method. (Figure 1)
